

Capital Projects Planning & Reporting Tool

Frequently Asked Questions

What are the disadvantages of existing district Capital Projects tracking methods?

Typical district software used to monitor Capital Projects is limited in scope. It cannot record multi-year information, rendering it incapable of tracking a project from budget to completion. It cannot generate SED reports.

Are my Construction Manager's records enough?

Although some Construction Management firms track project costs, they generally do not track soft costs. These include their own payments and other project-related expenses, such as furniture, fixtures and equipment.

Are my Architect's records enough?

Your architect may assist in filing SED forms, approving payments, and Change Orders. Architects do not provide exception-based records that flag non-conforming risk management issues.
